The IET

Case Study

A community project in partnership with VERINT.
Background

The IET (www.theiet.org) is one of the world’s leading professional societies for the engineering and technology community, with more than 168,000 members in 150 countries and offices in Europe, North America and Asia Pacific.

With a rich history dating back to 1871, the IET has always been champions of engineering and technology, inspiring, informing and influencing the global engineering and technology community to solve the challenges that matter and engineer a better world.
However, after extensive user research, they realised their community had grown beyond the capabilities of their platform and needed a new solution to continue scaling and providing what engineers want from an IET community.

The fundamental challenges revolved around the lack of control and functionality. Poor site structure meant content was hidden away in silos, making it hard for users to find and engage with content of interest.

Meanwhile, poor user functionality severely restricted how members navigated the site.

**Challenge**

The IET’s online community had been in place since 2012 and had grown to a membership of over 23,000 users, attracting on average 26,000 monthly unique visitors and 115,000 page views.
Key functionality like search, filtering, tagging, flagging, groups, archiving, integrations, Q&A and webinars was needed to continue providing for the needs of a growing membership.

The IET also understood the necessity of building trust between members and the importance of creating a safe, credible space where engineers can ask questions, share information and demonstrate their industry knowledge. However, without additional functionality, this wouldn’t be possible.

Because of these challenges they struggled to maintain a sense of community.

Key Challenges:
- Outgrown Current Platform
  - Lack of Functionality
  - Poor user experience
  - Personalisation
- Credibility
- Siloed Communities
After extensive research, The IET selected 4 Roads to build their new community using Verint Community.

The platform, along with its robust features and its history of innovation and continuous improvement, best matched The IET functionality wishlist.

However, unlike other vendors, a key perk in selecting Verint Community is having all features and functionality available out-of-the-box, cutting down development time and enabling The IET to launch with a strong arsenal of community tools.
SOLUTION: VERINT COMMUNITY

To create a better member experience, The IET wanted each user to have a personalised experience. To achieve this, 4 Roads extended the community to allow users to select their areas of interest and specialism. Now The IET can expose relevant content within the new activity feed, general discussion forum and digest emails.

This extends into a custom explore page where users can see site-wide content filtered by area of interest, including questions, blog posts and events. For example, a robotics engineer doesn’t have to see content relating to railways unless they want to.

We can now also automatically promote unanswered questions to users with corresponding expertise to show discussions to a wider audience and improve the likelihood of finding/giving an answer in an acceptable time frame.
This improved level of control encourages engagement, networking and the exchange of ideas between disciplines, borders and generations.

But as a professional membership organisation trying to advance the exchange of ideas and promote the positive role of science, engineering and technology in the world, validating engagement as credible and professional was also critical.

To facilitate this, 4 Roads added badges to identify community members whose contributions have been helpful, giving members a quick way to validate the advice or feedback they receive.

This also challenges and motivates users to accumulate reputation and recognition, opening the door to collaboration opportunities.
By migrating The IET community to Verint Community, we have built the foundations for a central hub generating content, questions and answers, putting the IET in a strong position to connect with busy engineers who need support from knowledgeable peers.

With the community tools now available to The IET, they can better build a sense of community between their members and The IET. They can forge a personalised user experience that encourages knowledge sharing, archiving and collaboration. And they can raise awareness of the wider IET products and services by highlighting relevant content.

**CASE STUDY**

This project aimed to create a safe online space for engineers to share knowledge. To foster an ethos of sharing and collaboration and encourage the positive behaviours and interactions expected on the site.

**RESULTS**

We've found 5075 discussions for you.

- **Degree trumps C&G?**
  - Replied 6 hours ago by map1

- **Power Stations.**
  - Replied 2 days ago by map1

- **Zs measurement on IT Systems**
  - Replied 2 days ago by Geoff I.

- **Self-driving**
  - Replied 4 days ago by Benyamin Davodian

- **Sussex Network Web Pages**
  - Replied 4 days ago by David James

- **BS for Star Delta starters**
  - Started 5 days ago by grahamro

- **Possible Nuclear Leakage at Power Plant.**
  - Replied 6 days ago by Roger B

- **Custom Built Electrical Panels**
  - Replied 9 days ago by prephil

- **Plan Report**
  - Replied 10 days ago by Khaled El-Sherbiny
RESULTS

Full breakdown of what members can now do:

- See content/discussions related to user chosen interests
- Bookmark content
- Tag contributions with taxonomy tags
- Quickly see unanswered questions related to chosen interests
- See related content from other IET sites (IET Events, E&T magazine, IET.Tv, E&T Jobs, Books)
- Initiate conversations with members who share interests
- Initiate private networking groups or discussions
- Search by name, interests, expertise or location
- Search for speakers and collaboration opportunities
- Make individual posts anonymous if required
- Add professional accreditations to their profile
- Archive ‘helpful’ answers into an archive or wiki
- Sign in using their IET’s single sign-on (SSO)

of technical queries now answered the same day
Engineers need to be able to resolve problems quickly and accurately. At the IET, we are uniquely placed to connect engineers to one another and facilitate the exchange of knowledge.

Our previous community wasn’t serving that purpose. Thanks to 4 Roads, it is now much easier to connect engineers with one another, and with events and information related to their technical interests.

— Evanna Gale
Content and Engagement Manager
